

Financial Performance Dashboard – Project Report

Objective of the Project

The objective of this project is to analyze the company's financial performance across different countries, products, and segments.

The dashboard provides a clear view of:

- Revenue (Gross Sales)
- Profit
- Cost of Goods Sold (COGS)
- Discounts
- Units Sold
- Profitability trends over time
- Country-level and product-level performance
- Discount impact on sales

This allows stakeholders to evaluate business health, identify profitable areas, detect loss-driving segments, and support strategic decisions.

Tools & Technologies Used

- Power BI Desktop
- Power Query for data cleaning
- DAX (Data Analysis Expressions) for calculated measures
- Data modelling
- Interactive dashboards and slicers

Data Cleaning & Transformation

Steps Performed:

1. Removed dollar symbols (\$) from financial fields
2. Removed hyphens and invisible characters
3. Cleaned and trimmed all text columns

4. Converted data types:
 - Financial fields → Decimal Number
 - Date → Date Type
 - Year & Month Number → Whole Number
5. Fixed column names (removed trailing spaces)
6. Ensured fields are ready for DAX calculations

DAX Measures Used

Key Measures:

Total Gross Sales = SUM(financial_data[Gross Sales])

Total Profit = SUM(financial_data[Profit])

Total Units Sold = SUM(financial_data[Units Sold])

Total COGS = SUM(financial_data[COGS])

Total Discounts = SUM(financial_data[Discounts])

Profit Margin = DIVIDE([Total Profit], [Total Gross Sales])

Gross Margin % = DIVIDE([Total Gross Sales] - [Total COGS], [Total Gross Sales])

Net Revenue = [Total Gross Sales] - [Total Discounts]

Discount Percentage = DIVIDE([Total Discounts], [Total Gross Sales])

Profit per Unit = DIVIDE([Total Profit], [Total Units Sold])

Yearly Gross Sales = CALCULATE([Total Gross Sales],
VALUES(financial_data[Year]))

Yearly Profit = CALCULATE([Total Profit], VALUES(financial_data[Year]))

These measures power all KPIs, charts, and insights in the dashboard.

Dashboard Features & Visualizations

◆ KPI Cards

- Total Gross Sales
- Total Profit
- Total Units Sold
- Total Discounts
- Profit Margin
- Gross Margin %

◆ Interactive Slicers

- Segment
- Product
- Country
- Year

◆ Visualizations:

1. **Discount Band vs Product (Heatmap / Matrix)**
Shows how discount bands affect product sales performance.
2. **Profit Trend by Year/Month (Line Chart)**
Displays profit growth or decline over time.
3. **Total Profit by Quarter (Column Chart)**
Helps identify seasonal or quarterly profit spikes.
4. **Sales by Country (Bar Chart)**
Highlights the best-performing countries.
5. **Gross Sales vs Discount (Scatter Plot)**
Shows correlation between discounts and revenue.

Each visual is interactive, responding to slicers and filters to enable deeper analysis.

Key Insights from the Dashboard

1. Highest Revenue Countries

- The United States and Canada generate the highest Gross Sales.
- Germany and France also showed strong performances.

2. Most Profitable Products

- Carretera
- Velo
These consistently rank high in both sales and profit.

3. Quarterly Profit Trend

- Q1 shows the highest profit performance.
- Seasonal patterns indicate stronger revenue early in the year.

4. Discount Analysis

- Higher discounts have *some* positive impact on Gross Sales
- But excessive discounts reduce profitability
- The medium discount band performs best for stable revenue.

5. Profit Trend

- Profit shows steady growth across months/year.
- Sharp rises in certain months indicate promotions or seasonal patterns.

Conclusion

The Financial Performance Dashboard is a powerful analytical tool for understanding revenue and profit drivers.

By leveraging Power BI's interactivity and DAX, the dashboard transforms raw data into meaningful insights, enabling stakeholders to make data-driven decisions.

It provides a complete view of financial health across countries, products, segments, and time periods.
